

WeeDip[®]

Miniature Implantable Temperature Data Logger

Miniature Low Cost Temperature Data Logger for Wildlife Research

Our implantable temperature data logger is specifically designed for fish, snakes, and other small animals. It enables seamless data transmission through tissue via our RFID antenna—no retrieval required! This breakthrough technology eliminates costly secondary surgeries, minimizes animal stress, and ensures continuous, reliable data collection. Boost your research efficiency with this minimally invasive, cost-effective solution.

WeeDip[®]

Temperature Data Logger

- **Temperature**

Range -10°C to 60°C
Resolution: 0.025°C |
Accuracy: +/- 0.125°C

- **Memory 92,000 values**
One time flash

- **Implantable**
medical-grade PETG-based material

- **RFID Communication**
FDX 134.2 kHz
Through flesh
communication

- **Free PC Software**

Ø 10 mm
Weight 1.7 gr
Battery life: 12 months
or 92,000 records
